

GIS, in partnership with SambaSafety, offers a best-in-class driver monitoring solution that manages driver data for all types of drivers across the nation. This solution will help you reduce costs, improve your reputation and enhance your risk mitigation efforts in one simple-to-use platform. Above all, the driver monitoring platform gives you the insight and visibility you need to make smart decisions about your driving population.

The solution:

- manages all driver data and automatically checks for new violations, DUI/DWI convictions, invalid licenses and approaching license or medical certification expiration dates
- provides an actionable driver score by standardizing infractions across states so you can easily compare and contrast without need for interpretation
- summarizes all recent driver activity into a simple, user-friendly dashboard
- decreases risk for lower insurance premiums, lower crash-related spend, less time lost to injury and better reputation
- as with all GIS solutions, comes part and parcel with dedicated account management and a single invoice
